Installation instructions

Drilling

Hammer drill or compressed air drill:
 Drill the hole with diameter and depth according to Table B1.
 Continue with step 2.

Vacuum drill: see Annex B2
 Drill the hole with diameter and depth according to Table B1.
 Additional cleaning is not necessary - continue with step 3.

Cleaning

Drill hole must be cleaned directly before installation of the anchor, or it must be protected against recontamination in a suitable manner until installation of the anchor.

Blow out the drill hole completely at least **2x** from the bottom of the drill hole with blow-out pump or compressed air.

Brush the drill hole **2x** with Cleaning Brush RB (Table B1).
 Observe and check brush diameter $d_{b,min}$. When inserting the brush into the drill hole, a clear resistance must be noticeable.
 Otherwise use a new Cleaning Brush.

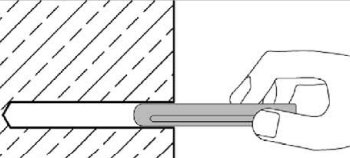

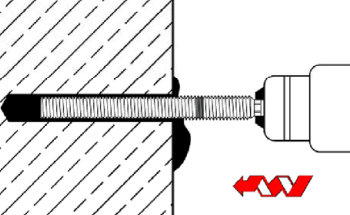

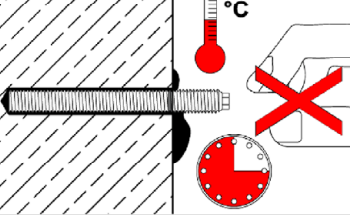

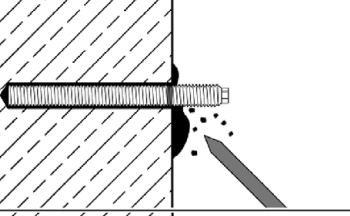

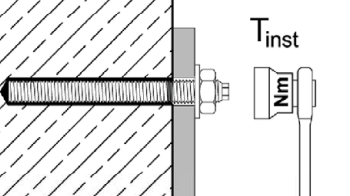

Blow out the drill hole completely at least **2x** from the bottom of the drill hole with blow-out pump or compressed air.

Installation instructions - continuation

Inserting the threaded rod		
3		Insert the capsule into the drill hole.
4		Drive in the anchor rod using a hammer drill set on rotary impact. Stop immediately after reaching the setting depth.
5		Observe curing time according to Table B3. Do not move or load the anchor until it is fully cured.
6		Remove excess adhesive.
7		Install fixture and apply installation torque T_{inst} according to Table B1.
