Europejska ocena techniczna: **ETA-20/0533, 16.12.2022**  
Jednostka ds. oceny technicznej: DIBt, Berlin  
Jednostka lub jednostki notyfikowane: NB 2873 – Technische Universität Darmstadt
- ❖ **Deklarowane właściwości użytkowe:**

Zasadnicze charakterystyki	Właściwości użytkowe
<b>Nośność i stateczność (BWR 1)</b>	
Odporności charakterystyczne pod obciążeniem rozciągającym (efekty statyczne i quasi-statyczne)	Załącznik / Annex C1, C2, C5, B2, B3
Odporności charakterystyczne na naprężenia poprzeczne (efekty statyczne i quasi-statyczne)	Załącznik / Annex C1, C3, C6
Przesunięcia	Załącznik / Annex C7
Charakterystyczna odporność na wstrząsy sejsmiczne kategorii C1	Załącznik / Annex C4
Wytrzymałość charakterystyczna i przemieszczenia dla kategorii wytrzymałości sejsmicznej C2	Wydajność nie oceniono
<b>Higiena, zdrowie i środowisko (BWR 3)</b>	
Zawartość, emisja i / lub uwalnianie substancji niebezpiecznych	Wydajność nie oceniono

Właściwości użytkowe określonego powyżej wyrobu są zgodne z zestawem deklarowanych właściwości użytkowych. Niniejsza deklaracja właściwości użytkowych wydana zostaje zgodnie z rozporządzeniem (EU) nr 305/2011 na wyłączną odpowiedzialność producenta określonego powyżej.

## Specifications of intended use

Chemical Anchor VZ with	Anchor rod V-A	Internally threaded anchor rod VZ-IG
Static or quasi-static action	M8 to M24	IG-M6 to IG-M16
Seismic action, performance category C1	M8 to M24	no performance assessed
Base materials	compacted, reinforced or unreinforced normal weight concrete without fibers acc. to EN 206:2013+A1:2016	
	strength classes C20/25 to C50/60, acc. to EN 206:2013+A1:2016	
	cracked or uncracked concrete	
Temperature range I -40°C to +40°C	max long-term temperature +24°C; max short-term temperature +40°C	
Temperature range II -40°C to +80°C	max long-term temperature +50°C; max short-term temperature +80°C	

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: all versions
- For all other conditions corresponding to corrosion resistance classes CRC according to EN 1993-1-4:2015, Annex A, Table A1:
  - V-A A4: CRC III
  - V-A HCR: CRC V

### Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Anchorages are designed according to EN 1992-4:2018 or TR 055, version February 2018

### Installation:

- Dry or wet concrete
- Making of drill hole by hammer drilling, compressed air drilling or vacuum drilling
- Installation direction: D3 - downwards, horizontally and upwards (e.g. overhead) installation
- Optionally, the annular gap between anchor rod and attachment can be backfilled. In this case, the washer is replaced by the filling washer (Part 3b, Annex A2). MKT injection mortars VMH, VMU plus, VMZ or other high-strength injection mortars with a compressive strength  $\geq 40\text{N/mm}^2$  can be used for backfilling.
- Internally threaded anchor rods: Bolts or threaded rod (incl. nut and washer) must at least correspond to the material and strength class of the internally threaded anchor rod that is used.

Curing time / Installation instruction - drilling

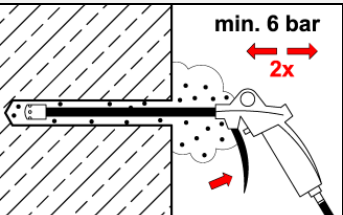

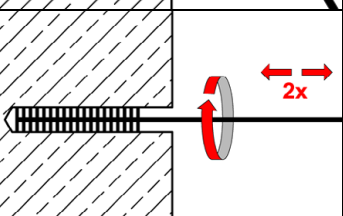

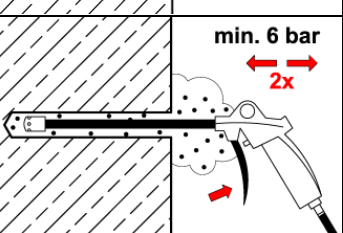

**Annex B4**

## Installation instructions – continuation

**Cleaning** - Drill hole must be cleaned directly before installation of the anchor, or it must be protected against recontamination in a suitable manner until installation of the anchor.

### Cleaning with compressed air

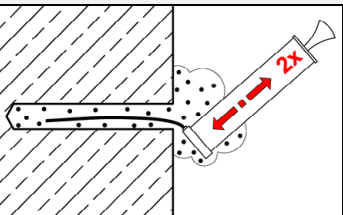

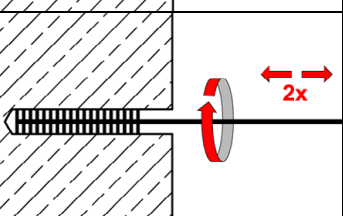

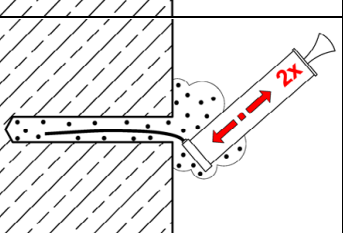

Sizes M8 to M24

2a		<p>Blow out the drill hole completely at least <b>2x</b> from the bottom of the drill hole with compressed air.</p>
2b		<p>Brush the drill hole <b>2x</b> with Cleaning Brush RB (Table B1 or B2). Observe and check brush diameter <math>d_{b,min}</math>. When inserting the brush into the drill hole, a clear resistance must be noticeable. Otherwise use a new Cleaning Brush.</p>
2c		<p>Blow out the drill hole completely at least <b>2x</b> from the bottom of the drill hole with compressed air.</p>

2

### Manual cleaning

Sizes M8 to M20

2a		<p>Blow out the drill hole completely at least <b>2x</b> from the bottom of the drill hole with blow-out pump.</p>
2b		<p>Brush the drill hole <b>2x</b> with Cleaning Brush RB (Table B1 or B2). Observe and check brush diameter <math>d_{b,min}</math>. When inserting the brush into the drill hole, a clear resistance must be noticeable. Otherwise use a new Cleaning Brush.</p>
2c		<p>Blow out the drill hole completely at least <b>2x</b> from the bottom of the drill hole with blow-out pump.</p>

## Installation instructions - continuation

Inserting the anchor rod V-A		
3		<p>Check the depth of drill hole. If necessary, mark anchoring depth on the anchor rods.</p> <p>Insert the capsule into the drill hole.</p>
4		<p>Drive in the anchor rod using a hammer drill set on rotary impact. Stop immediately after reaching the setting depth.</p>
5		<p>Observe curing time according to Table B3. Do not move or load the anchor until it is fully cured.</p>
6		<p>Remove excess adhesive.</p>
7		<p>Install fixture and apply installation torque <math>T_{inst}</math> according to Table B1.</p>
8		<p>The annular gap between anchor rod and fixture may optionally be filled with mortar (see Annex B1). Therefore, replace regular washer by filling washer (note thickness of the filling washer) and plug on reducing adapter on static mixer.</p> <p>Annular gap is completely filled, when excess mortar seeps out.</p>

## Installation instructions - continuation

Inserting the internally threaded anchor rod VZ-IG		
3		<p>Check the depth of drill hole.</p> <p>Insert the capsule into the drill hole.</p>
4		<p>Screw the setting tool into the internally threaded anchor rod VZ-IG until stop. Drive in the internally threaded anchor rod with a hammer drill set to rotary impact. Switch off the hammer drill immediately after reaching the setting depth.</p>
5		<p>Observe curing time according to Table B3. Do not move or load the anchor and don't remove the setting tool until it is fully cured.</p>
6		<p>Remove excess adhesive and unscrew the setting tool.</p>
7		<p>The fixture can be mounted with threaded rod, nut and washer or screw. Apply the installation torque <math>T_{inst}</math> according to Table B2.</p>
8		<p>The annular gap between threaded rod or screw and fixture may optionally be filled with mortar (see Annex B1). Therefore, replace regular washer by filling washer or assemble it on the screw (observe thickness of filling washer and minimum screw-in depth). Plug on reducing adapter on static mixer and fill annular gap. It is completely filled, when excess mortar seeps out.</p>

<sup>1)</sup> Fastening screws or threaded rods (incl. nut and washer) must comply with the appropriate material and property class of the internally threaded anchor rod. The characteristic shear resistance for steel failure of the given strength class are valid for the internally threaded anchor rod and the fastening element
