Specifications of intended use

Wedge Anchor	BZ3 / BZ3 A4 / BZ3 HCR			
	M8	M10	M12	M16
Static or quasi-static action	✓			
Seismic performance categories C1 and C2	✓			
Fire exposure	R30 / R60 / R90 / R120			
Variable, effective anchorage depth	35 mm to 90 mm	40 mm to 100 mm	50 mm to 125 mm	65 mm to 160 mm

Base materials:

- Cracked or uncracked concrete
- Reinforced or unreinforced normal weight concrete according to EN 206: 2013 + A1:2016
- Strength classes C20/25 to C50/60 according to EN 206: 2013 + A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: **BZ3, BZ3 A4, BZ3 HCR**
- For all other conditions according to EN 1993-1-4:2015-10 corresponding to corrosion resistance classes:
  - according to Annex A, Table A.3: CRC I - III **BZ3 A4, BZ3 HCR**
  - according to Annex A, Table A.3: CRC IV, V **BZ3 HCR**

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Design method EN 1992-4:2018 and Technical Report TR 055

Installation:

- Hole drilling by hammer drill bit or vacuum drill bit
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener (exception: when using the cap nut HM)
- Optionally, the annular gap between fixture and stud of the BZ3 can be filled to reduce the hole clearance. For this purpose, the filling washer (annex A3) must be used in addition to the supplied washer. For filling use high-strength mortar with compressive strength ≥ 40N/mm².

Installation instructions

1		Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.
2		Blow out dust. Alternatively vacuum clean down to the bottom of the hole.
3		Check position of nut and washer.
4		Drive in fastener.
5		Apply installation torque T_{inst}.

Installation with cap nut HM

1		Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.
2		Blow out dust. Alternatively vacuum clean down to the bottom of the hole.

	Installation with setting gauge		Installation without setting gauge	
3		Remove nut and washer. Attach setting gauge.		Check position of nut.
4		Drive in fastener until end of the anchor is level with setting gauge.		Drive in fastener
5		Check excess length of the anchor, remove setting gauge.		Remove nut.
6		Screw on washer and cap nut.		Screw on cap nut
7		Apply installation torque T_{inst}.

Annex B6

Installation instructions with filling of annular gap

1		Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.
2		Blow out dust. Alternatively vacuum clean down to the bottom of the hole.
3		Fit the filling washer additionally to the fastener. Check position of nut and washer.
4		Drive in fastener.
5		Apply installation torque T_{inst}.
6		Fill the annular gap between anchor and fixture with mortar (compressive strength ≥ 40 N/mm²). Use enclosed reducing adapter. Observe the processing information of the mortar! The annular gap is completely filled, when excess mortar seeps out.
