Installation instructions

1		<p>Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.</p>
2		<p>Blow out dust. Alternatively vacuum clean down to the bottom of the hole.</p>
3		<p>Drive in fastener with filling washer until effective anchorage depth is reached.</p>
4		<p>Apply installation torque T_{inst} according to Table B1 by using torque wrench.</p>
5		<p>Screw on locknut until hand tight then tighten $\frac{1}{4}$ to $\frac{1}{2}$ turn.</p>
6		<p>Fill the annular gap between anchor and fixture with mortar (compressive strength $\geq 40 \text{ N/mm}^2$, e.g. MKT Injection System VMH, VMZ or VMU plus). Use enclosed reducing adapter. Observe the processing information of the mortar! The annular gap is completely filled, when excess mortar seeps out.</p>
