Bitnih značajka	Svojstva
<b>TEMELJNI ZAHTJEVI ZA GRAĐEVINE (BWR1)</b>	
Karakteristična otpornost pod naprezanjem (statički i kvazistatički učinci)	Prilog/Annex C1 – C2
Karakteristična otpornost pod lateralnim stresom (statički i kvazistatički učinci)	Prilog/Annex C3
Pomaci (statički i kvazistatički učinci)	Prilog/Annex C4
Karakteristični otpor i pomicanja za seizmičku izvedbu C1 + C2	NPD (No Performance Determined) bez utvrđenog svojstva
<b>Sigurnost u slučaju požara (BWR2)</b>	
Ponašanje požara	Klasa A1
Otpornost na vatru	NPD (No Performance Determined) bez utvrđenog svojstva

Prije utvrđeno svojstvo proizvoda u skladu je s objavljenim svojstvima. Ova izjava o svojstvima izdaje se, u skladu s Uredbom (EU) br. 305/2011, pod isključivom odgovornošću prethodno utvrđenog proizvođača.

Za proizvođača i u njegovo ime potpisao:

### Base materials:

- Compacted, reinforced or unreinforced normal weight concrete (without fibers) acc. to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

### Use conditions (Environmental conditions):

Structures subject to dry internal conditions	zinc plated steel, stainless steel A4, high corrosion resistant steel HCR
Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist	stainless steel A4, high corrosion resistant steel HCR
Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist <sup>1)</sup>	high corrosion resistant steel HCR

<sup>1)</sup> Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed according to EN 1992-4:2018 or TR 055

### Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application.
- Anchor installation such that the effective anchorage depth is complied with. This compliance is ensured, if the thickness of fixture is not greater than the maximum thickness of fixture marked on the anchor in accordance with Annex A1 and A2 and the hexagon nut is placed at the end of the conical bolt as delivered by the manufacturer.
