

## SUORITUSTASOILMOITUS

DoP Nro: **MKT-1.2-301\_fi**

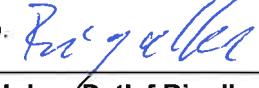

- ❖ **Tuotetyypin yksilöllinen tunniste:** Kynsien ankkuri N
- ❖ **Aiottu käyttötarkoitus (aiotut käyttötarkoituksit):** Kiinnitin käytettäväksi betonissa tarpeettomille ei-rakenteellisille järjestelmissä, katso liite / Annex B
- ❖ **Valmistaja:** MKT Metall-Kunststoff-Technik GmbH & Co.KG  
Auf dem Immel 2  
67685 Weilerbach
- ❖ **Suoritustason pysyvyyden arvioinnissa ja varmentamisessa käytetty järjestelmä/käytetyt järjestelmät:** 2+
- ❖ **Eurooppalainen arviontiasiakirja:** EAD 330747-00-0601  
Eurooppalainen tekninen arvointi: ETA-11/0240, 21.12.2021  
Teknisestä arvioinnista vastaava laitos: DIBt, Berlin  
Ilmoitettu laitos/ilmoitetut laitokset: NB 2873 – Technische Universität Darmstadt
- ❖ **Ilmoitettu suoritustaso/ilmoitetut suoritustasot:**

| Olenaiset ominaisuudet   | Suoritustaso       |
|--|--------------------|
| <b>Paloturvallisuus (BWR 2)</b>  |                    |
| Palokäyttäytyminen   | Luokka A1          |
| Palonkestävyys   | Liite/Annex C2     |
| <b>Käyttöturvallisuus käytössä (BWR 4)</b>   |                    |
| Ominaisvastus kaikille kuormaan suunnille ja kaikille vikatiloille yksinkertaistetulle suunnittelumenetelmälle | Liite/Annex B2, C1 |
| Kierrätettävyys  | Liite/Annex B1     |

Edellä yksilöidyn tuotteen suoritustaso on ilmoitettujen suoritustasojen joukon mukainen. Tämä suoritustasoilmoitus on asetuksen (EU) N:o 305/2011 mukaisesti annettu edellä ilmoitetun valmistajan yksinomaисella vastuulla.

Valmistajan puolesta allekirjoittanut:

  
**Stefan Weustenhagen**  
(Toimitusjohtaja)  
**Weilerbach, 21.12.2021**

p.p.   
**Dipl.-Ing. Detlef Bigalke**  
(Tuotekehityksen johtaja)

Tämän suoritusilmoituksen alkuperäinen teksti on kirjoitettu saksaksi. Jos käänökset poikkeavat toisistaan, saksankielinen versio on pätevä.

| Use conditions (environmental conditions):   | Effective anchorage depth                                      |
|--|--|
| • Structures subject to dry internal conditions<br>(zinc plated steel, stainless steel or high corrosion resistant steel)  | $h_{ef} \geq 30\text{mm}$ and<br>$h_{ef,red} \geq 25\text{mm}$ |
| • Structures subject to permanently damp internal conditions, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)   | $h_{ef} \geq 30\text{mm}$ and<br>$h_{ef,red} \geq 25\text{mm}$ |
| • Structures subject to external atmospheric exposure including industrial and marine environment, if no particular aggressive conditions exist<br>(stainless steel or high corrosion resistant steel) | $h_{ef} \geq 30\text{mm}$                                      |
| • Structures subject to external atmospheric exposure and to permanently damp internal conditions, if other particular aggressive conditions exist (high corrosion resistant steel)                    | $h_{ef} \geq 30\text{mm}$                                      |

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

### Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be fastened. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.).
- Design of fastenings according to EN 1992-4:2018, simplified design method C
- Fasteners are only to be used for redundant non-structural systems.

### Installation:

- Drill hole by hammer drilling or vacuum drilling.
- Installation only as supplied by the manufacturer, without replacement of individual parts.
- Fastener installation such that the effective setting depth is complied with. This compliance is ensured, if the admissible thickness of fixture is kept or the loop of Nail Anchor N-O rests on the concrete surface.

<sup>1)</sup> A fixing point is defined as:

- Single fastener
- Fastener group with a minimum spacing  $s$  of  $50 \text{ mm} \leq s < s_{cr}$

If the spacing in a fixing point is greater than or equal to the respective spacing in this table, the characteristic resistances apply to every single fastener.

<sup>2)</sup> Intermediate values can be linearly interpolated

<sup>3)</sup> No performance assessed.

<sup>1)</sup> A fixing point is defined as:

- Single fastener,
- Fastener group with a minimum spacing s of  $50 \text{ mm} \leq s < s_{cr}$

If the spacing in a fixing point is greater than or equal to the respective spacing in this table, the characteristic resistances apply to every single fastener

<sup>2)</sup> No performance assessed

<sup>3)</sup> Only in connection with threaded rods M8, M10 or M12 minimum strength class 5.8.
