DEKLARACJA WŁAŚCIWOŚCI UŻYTKOWYCH

DoP Nr: **MKT-341- pl**

- ✧ **Niepowtarzalny kod identyfikacyjny typu wyrobu:** **Układ wtryskowy VMH do betonu**
- ✧ **Zamierzone zastosowanie lub zastosowania:** System wtryskowy do kotwienia w betonie, patrz załącznik B /Annex B
- ✧ **Producent:** MKT Metall-Kunststoff-Technik GmbH & Co.KG
Auf dem Immel 2
67685 Weilerbach
- ✧ **System(-y) oceny i weryfikacji stałości właściwości użytkowych:** 1
- ✧ **Europejski dokument oceny:** **EAD 330499-01-0601**
Europejska ocena techniczna: **ETA-17/0716, 06.12.2018**
Jednostka ds. oceny technicznej: DIBt, Berlin
Jednostka lub jednostki notyfikowane: NB 1343 – MPA, Darmstadt

✧ **Deklarowane właściwości użytkowe:**

Zasadnicze charakterystyki	Właściwości użytkowe
Nośność i stateczność (BWR1)	
Charakterystyczny opór przy naprężeniu rozciągającym (efekty statyczne i quasi-statyczne)	Załącznik/Annex C1, C3, C5, C7
Charakterystyczny opór przy naprężeniu bocznym (efekty statyczne i quasi-statyczne)	Załącznik/Annex C2, C4, C6, C8
Przesunięcia (efekty statyczne i quasi-statyczne)	Załącznik/Annex C9 – C11
Charakterystyczny opór dla kategorii badań sejsmicznych C1	Załącznik/Annex C3, C4, C7, C8
Charakterystyka rezystancji i przemieszczeń dla kategorii C2 dla badań sejsmicznych	Załącznik/Annex C3, C4, C9
Higiena, zdrowie i środowisko (BWR3)	
Zawartość, emisja i / lub uwalnianie substancji niebezpiecznych	NPD (No Performance Determined) właściwości użytkowe nieustalone

Właściwości użytkowe określonego powyżej wyrobu są zgodne z zestawem deklarowanych właściwości użytkowych. Niniejsza deklaracja właściwości użytkowych wydana zostaje zgodnie z rozporządzeniem (UE) nr 305/2011 na wyłączną odpowiedzialność producenta określonego powyżej.

W imieniu producenta podpisał(-a):

Stefan Weustenhagen
(Kierownik)

Weilerbach, 06.12.2018

p.p.

Dipl.-Ing. Detlef Bigalke
(Kierownik Rozwoju Produktu)

Oryginał tej deklaracji właściwości użytkowych został sporządzony w języku niemieckim. W przypadku odchyień w tłumaczeniu obowiązuje wersja niemiecka.

Specification of intended use

Injection System VMH	Threaded rod	Internally threaded anchor rod	Rebar
Static or quasi-static action	M8 - M30 zinc plated, A2, A4, HCR	VMU-IG M6 - VMU-IG M20 electroplated, A4, HCR	Ø8 - Ø32
Seismic action, category C1	M8 - M30 zinc plated ¹⁾ , A4, HCR	-	Ø8 - Ø32
Seismic action, category C2	M12 - M24 zinc plated ¹⁾ (property class 8.8) A4, HCR (property class ≥ 70)	-	-
Base materials	compacted, reinforced or unreinforced normal weight concrete (without fibers) acc. to EN 206:2013		
	Strength classes acc. to EN 206:2013: C20/25 to C50/60		
	Cracked or uncracked concrete		
Temperature Range I	-40 °C to +80 °C	max. long term temperature +50 °C and max. short term temperature +80 °C	
Temperature Range II	-40 °C to +120 °C	max. long term temperature +72 °C and max. short term temperature +120 °C	
Temperature Range III	-40 °C to +160 °C	max. long term temperature +100 °C and max. short term temperature +160 °C	

¹⁾ except hot-dip galvanised

Use conditions (Environmental conditions):

Structures subject to dry internal conditions	zinc plated steel, stainless steel A2 or A4 high corrosion resistant steel HCR
Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist	stainless steel A4 high corrosion resistant steel HCR
Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist ²⁾	high corrosion resistant steel HCR

²⁾ Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Anchorages are designed in accordance with EN 1992-4:2018 or Technical Report TR 055

Installation:

- Dry or wet concrete or waterfilled boreholes (not seawater)
- Hole drilling by hammer or compressed air drill or vacuum drill mode
- Overhead installation allowed
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Screws and threaded rods (incl. nut and washer) must at least correspond to the material and strength class of the internally threaded anchor rod used

Injection System VMH for concrete

Intended Use
Specifications

Annex B1

Table B1: Installation parameters for threaded rods

Threaded rod		M8	M10	M12	M16	M20	M24	M27	M30
Diameter of threaded rod	$d=d_{nom}$ [mm]	8	10	12	16	20	24	27	30
Nominal drill hole diameter	d_0 [mm]	10	12	14	18	22	28	30	35
Effective anchorage depth	$h_{ef,min}$ [mm]	60	60	70	80	90	96	108	120
	$h_{ef,max}$ [mm]	160	200	240	320	400	480	540	600
Diameter of clearance hole in the fixture ¹⁾	Pre-setting installation $d_f \leq$ [mm]	9	12	14	18	22	26	30	33
	Through setting installation $d_f \leq$ [mm]	12	14	16	20	24	30	33	40
Installation torque	$T_{inst} \leq$ [Nm]	10	20	40 (35) ²⁾	60	100	170	250	300
Minimum thickness of member	h_{min} [mm]	$h_{ef} + 30 \text{ mm}$ $\geq 100 \text{ mm}$			$h_{ef} + 2d_0$				
Minimum spacing	s_{min} [mm]	40	50	60	75	95	115	125	140
Minimum edge distance	c_{min} [mm]	35	40	45	50	60	65	75	80

¹⁾ For applications under seismic loading the diameter of clearance hole in the fixture shall be at maximum $d_{nom} + 1 \text{ mm}$ or alternatively the annular gap between fixture and threaded rod shall be completely filled with mortar

²⁾ Installation torque for M12 with steel grade 4.6

Table B2: Installation parameters for internally threaded anchor rods

Internally threaded anchor rod		IG-M 6	IG-M 8	IG-M 10	IG-M 12	IG-M 16	IG-M 20
Inner diameter of threaded rod	d_2 [mm]	6	8	10	12	16	20
Outer diameter of threaded rod ¹⁾	$d=d_{nom}$ [mm]	10	12	16	20	24	30
Nominal drill hole diameter	d_0 [mm]	12	14	18	22	28	35
Effective anchorage depth	$h_{ef,min}$ [mm]	60	70	80	90	96	120
	$h_{ef,max}$ [mm]	200	240	320	400	480	600
Diameter of clearance hole in the fixture	$d_f \leq$ [mm]	7	9	12	14	18	22
Installation torque	$T_{inst} \leq$ [Nm]	10	10	20	40	60	100
Minimum screw-in depth	l_{IG} [mm]	8	8	10	12	16	20
Minimum thickness of member	h_{min} [mm]	$h_{ef} + 30 \text{ mm}$ $\geq 100 \text{ mm}$			$h_{ef} + 2d_0$		
Minimum spacing	s_{min} [mm]	50	60	75	95	115	140
Minimum edge distance	c_{min} [mm]	40	45	50	60	65	80

¹⁾ With metric thread acc. to EN 1993-1-8:2005+AC:2009

Table B3: Installation parameters for rebar

Rebar		Ø 8	Ø 10	Ø 12	Ø 14	Ø 16	Ø 20	Ø 24	Ø 25	Ø 28	Ø 32
Diameter of rebar	$d=d_{nom}$ [mm]	8	10	12	14	16	20	24	25	28	32
Nominal drill hole diameter	d_0 [mm]	12	14	16	18	20	25	32	32	35	40
Effective anchorage depth	$h_{ef,min}$ [mm]	60	60	70	75	80	90	96	100	112	128

Blow-out pump (volume 750ml)
 Drill bit diameter (d_0): 10 mm to 20 mm
 Drill hole depth (h_0): $\leq 10 d_{nom}$
 for uncracked concrete

Recommended compressed air tool (min 6 bar)
 Drill bit diameter (d_0): all diameters

Retaining washer
 Drill bit diameter (d_0):
 18 mm to 40 mm

Steel brush
 Drill bit diameter (d_0): all diameters

Injection System VMH for concrete

Intended Use
 Cleaning and setting tools

Annex B3

Installation Instructions

Drilling of the hole

1.

Drill with hammer drill or compressed air drill or vacuum drill a hole into the base material to the size required by the selected anchor (Table B1, B2 or B3). In case of aborted drill hole, the drill hole shall be filled with mortar.

Cleaning

Attention! Standing water in the bore hole must be removed before cleaning!

Cleaning with compressed air

Cracked and uncracked concrete, all diameters

2a.

Starting from the bottom or back of the bore hole, blow out the hole with compressed air (min. 6 bar) a minimum of **two** times until return air stream is free of noticeable dust. If the bore hole ground is not reached, an extension must be used.

2b.

Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush $\geq d_{b,min}$ (Table B4) a minimum of **two** times. If the bore hole ground is not reached with the brush, an appropriate brush extension must be used.

2c.

Starting from the bottom or back of the bore hole, blow out the hole with compressed air (min. 6 bar) again a minimum of **two** times until return air stream is free of noticeable dust. If the bore hole ground is not reached, an extension must be used.

2.

Manual cleaning

Drill hole diameter $d_0 \leq 20\text{mm}$ and drill hole depth $h_0 \leq 10 d_{nom}$ (uncracked concrete only)

2a.

Starting from the bottom or back of the bore hole, blow out the hole with the blow-out pump a minimum of **four** times.

2b.

Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush $\geq d_{b,min}$ (Table B4) a minimum of **four** times. If the bore hole ground is not reached with the brush, an appropriate brush extension must be used.

2c.

Starting from the bottom or back of the bore hole blow out the hole again a minimum of **four** times.

After cleaning, the bore hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the bore hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

Injection System VMH for concrete

Intended Use
Installation instructions

Annex B4

Installation instructions (continuation)

Injection		
3.		Attach the supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool. For every working interruption longer than the recommended working time (Table B5) as well as for new cartridges, a new static-mixer shall be used.
4.		Prior to inserting the rod into the filled bore hole, the position of the embedment depth shall be marked on the threaded rod or rebar
5.		Prior to dispensing into the drill hole, squeeze out separately a minimum of three full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey colour.
6a.		Starting from the bottom or back of the cleaned drill hole fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid air pockets. If the bore hole ground is not reached, an appropriate extension nozzle shall be used. Observe working times given in Table B5.
6b.		Retaining washer and mixer nozzle extensions shall be used according to Table B4 for the following applications: <ul style="list-style-type: none"> • Horizontal installation (horizontal direction) and ground installation (vertical downwards direction): Drill bit-$\varnothing d_0 \geq 18$ mm and anchorage depth $h_{ef} > 250$mm • Overhead installation: Drill bit-$\varnothing d_0 \geq 18$ mm

Injection System VMH for concrete

Intended Use
Installation instructions (continuation)

Annex B5

Installation instructions (continuation)

Inserting the anchor

7.		<p>Push the threaded rod or reinforcing bar into the hole while turning slightly to ensure proper distribution of the adhesive until the embedment depth is reached.</p> <p>The anchor shall be free of dirt, grease, oil or other foreign material.</p>
8.		<p>Make sure that excess mortar is visible at the top of the hole. If these requirements are not maintained, repeat application before end of working time! For overhead installation, the anchor should be fixed (e.g. by wedges).</p>
9.		<p>Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (attend Table B5).</p>
10.		<p>Remove excess mortar.</p>
11.		<p>The fixture can be mounted after curing time. Apply installation torque T_{inst} according to Table B1 or B2.</p>
12.		<p>Annular gap between anchor rod and attachment may optionally be filled with mortar. Therefore, replace regular washer by washer with bore and plug on reducing adapter on static mixer. Annular gap is completely filled, when excess mortar seeps out.</p>

Table B5: Working time and curing time

Concrete temperature	Working time	Minimum curing time	
		dry concrete	wet concrete
-5°C to -1°C	50 min	5 h	10 h
0°C to +4°C	25 min	3,5 h	7 h
+5°C to +9°C	15 min	2 h	4 h
+10°C to +14°C	10 min	1 h	2 h
+15°C to +19°C	6 min	40 min	80 min
+20°C to +29°C	3 min	30 min	60 min
+30°C to +40°C	2 min	30 min	60 min
Cartridge temperature	+ 5°C to + 40°C
